

Tutorial 1 AGWA version 1.5

Posted by allisonbr - 2008/02/01 20:30

I am just beginning to use the AGWA software. I am using Tutorial 1 that is provided as part of the download documents and version 1.5 of AGWA.

I have all the data/GIS files downloaded and appear in the Table of contents when loaded into Arc View. The units have been changed to meters. The tables were also successfully added.

Unfortunately, when I check each of the data layers, not all of them appear in the view.

- Fairbank.shp and NWS_gages.shp both appear as points.
- Sierra.shp, Sp_dir and Uspb.shp do not show up on the map when checked
- Sp_statsgo.shp, Nalc73, Nalc97, Sp_dem and Sp_accum are one solid color on the map when each are checked

Can you provide some insight as to where I might be missing something?

Regards,
Bruce

We'd like to help you make this work. Here are some suggestions that may help.

Make sure that you are zoomed to the full extent by going to "View", then "Full Extent". Note that the order the files appear in the Table of Contents determines how they will appear in the view. Have you tried turning them on one at a time to make sure all the layers are there and displaying correctly?

Fairbank.shp, NWS_gages.shp, Sierra.shp, and Uspb.shp are all point files.

Sp_statsgo.shp, Nalc73, Nalc97, Sp_dem and Sp_accum have the same extent so will overlay each other.

Sp_statsgo will appear as a single color until you manually change the legend colors.

Let us know if this helps.

Thanks for the quick reply. I use another GIS in my classes and undergraduate projects and I am just beginning to use ESRI products. Your question to me:

Make sure that you are zoomed to the full extent by going to "View", then "Full Extent".

was the simple solution. I have moved on through about 60% of Tutorial 1.

Thanks
